

Serial No. 09/512,411

**AMENDMENTS TO THE CLAIMS:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**LISTING OF CLAIMS:**

1. (Currently Amended) A method of establishing a quality of service session between a correspondent node and a mobile node, the mobile node having a home address in a home network and being temporarily connected at a care-of address in a foreign network, the method comprising the steps of:

generating, in the foreign network, a modified reply message having a source address of the mobile node's care-of address in place of the mobile node's home address and a destination address of the correspondent node; and  
transmitting the modified reply message.

2. (Original) The method of claim 1, further comprising the steps of:  
receiving, in the home network, a request message having a source address of the correspondent node and a destination address of the mobile node's home address;  
creating a modified request message by replacing the destination address of the request message with the mobile node's care-of address; and  
transmitting the modified request message to the foreign network, whereby the modified reply message is generated responsive to the modified request message.

3. (Original) The method of claim 2, wherein  
the step of generating the modified reply message is carried out by proxy device in the foreign network, the proxy device being associated with the mobile node; and  
further comprising the steps of:  
responsive to receipt of the modified request message at the proxy device,

Serial No. 09/512,411

sending a quality of service indication signal to the mobile node, whereby the modified reply message is generated responsive to receipt of a quality of service acknowledgement from the mobile node.

4. (Original) The method of claim 2, wherein  
the quality of service session is an RSVP session;  
the request message is a Path message; and  
the modified reply message is a Reservation message.

5. (Original) The method of claim 1, further comprising the steps of:  
receiving, in the home network, the modified reply message;  
creating a further modified reply message by replacing the source address with the mobile node's home address; and  
transmitting the further modified reply message.

6. (Original) The method of claim 5, wherein the correspondent node generates the request message and receives the further modified reply message.

7. (Original) The method of claim 5, wherein:  
the correspondent node is associated with a correspondent proxy device, whereby:  
the correspondent proxy device generates the request message responsive to a quality of service request from the correspondent node; and  
the correspondent proxy device generates a quality of service confirmation responsive to receipt of the further modified reply message.

8. (Original) The method of claim 1, wherein the step of generating the modified reply message is carried out in the mobile node.

9. (Original) The method of claim 1, wherein the step of generating the modified reply message comprises:

Serial No. 09/512,411

generating a reply message having a source address of the mobile node's home address and a destination address of the correspondent node; and

replacing the source address with the mobile node's care-of address, thereby generating the modified reply message.

10. (Original) The method of claim 1, in which the step of generating the modified reply message is carried out by a proxy device in the foreign network, the proxy device being associated with the mobile node.

11. (Original) The method of claim 1, wherein the quality of service session is an RSVP session; and the modified reply message is a Reservation message.

12. (Currently Amended) A mobile IP environment capable of supporting a quality of service session, comprising:

a correspondent node;

a mobile node, having a home address in a home network and being temporarily connected at a care-of address in a foreign network,

a proxy device, in the foreign network, the proxy device associated with the mobile node for generating a modified reply message having a source address of the mobile node's care-of address in place of the mobile node's home address and a destination address of the correspondent node.

13. (Original) The mobile IP environment of claim 12, wherein the proxy device is located in the mobile node.

14. (Original) The mobile IP environment of claim 12, wherein the proxy device is located outside the mobile node and coupled to the mobile node.

15. (Original) The mobile IP environment of claim 12, wherein:

Serial No. 09/512,411

the quality of service session is an RSVP session;  
the modified reply message is a Reservation message.

16. (Currently Amended) A system capable of supporting a quality of service session. Comprising:

a correspondent node;  
a mobile node having a home address in a home network and being temporarily connected at a care-of address in a foreign network,

a proxy device, in the foreign network, the proxy device associated with the mobile node for generating a modified reply message having a source address of the mobile node's care-of address in place of the mobile node's home address and a destination address of the correspondent node.

17. (Original) The system of claim 16, wherein the proxy device is located in the mobile.

18. (Original) The system of claim 16, wherein the proxy device is located outside the mobile node and coupled to the mobile node.

19. (Original) The system of claim 16, wherein;  
the quality of service session is an RSVP session.  
The modified reply message is a Reservation message.
